About Watt a Save

On 12 October 2022, the Home Builders Federation (HBF) published a report highlighting the environmental and financial benefits of new homes verses existing properties. The report is available on the HBF website: www.hbf.co.uk

Key messages

- New build homes help reduce carbon emissions by more than 500,000 tonnes per year, emitting a third of the carbon of an older property.
- New build houses can save homeowners £2,600 in energy bills each year.
- UK house builders are committed to increasing the energy efficiency of new homes.
- The UK house builders are embracing new technologies to realise potential environmental and financial savings of new homes.
